Shakthi G

Java Backend / Full-Stack Developer

shakthireign@gmail.com 9994199885 Trichy, Tamilnadu LinkedIn

Portfolio Website GitHub

Professional Summary

Entry-level Java Backend / Full-Stack Developer with hands-on expertise in Core Java, JDBC, Servlets, JSP, SQL, and PostgreSQL. Experienced in enterprise operational standards and multi-tier system development using the Repository-Service pattern. Completed Full-Stack Java development training at QSpiders, with a proven ability to build secure CRUD architectures, normalized databases, and role-based workflows.

Skills

Programming Languages — Java, SQL, JavaScript
Java Technologies — JDBC, Servlets, JSP
Backend Technologies — Spring Boot, REST APIs, Layered Architecture, Repository-Service Pattern
Database Management — PostgreSQL, MySQL
Web Technologies — HTML5, CSS3, JavaScript (ES6+), DOM Manipulation
Tools & IDEs — Git, GitHub, Eclipse IDE, VS Code

Projects

SharePlate - Food Rescue & Distribution

- Technologies: Java, Servlets, JSP, PostgreSQL, HTML5, CSS3, JavaScript
- Architected a multi-role web platform connecting Donors, NGOs, and Volunteers to streamline food collection and delivery logistics.
- Implemented role-based access control (RBAC) and lifecycle state machines tracking listings, claim verification, volunteer assignment, and handover.
- Designed normalized PostgreSQL database schemas to maintain data integrity across user profiles, user requests, and transaction histories.

JobForge - Java-Based Job Management System

- Technologies: Core Java, JDBC, PostgreSQL, SQL, Eclipse, Git
- Engineered a modular job portal backend implementing the Repository and Service Layer pattern to decouple business logic from data access operations.
- Integrated PostgreSQL using JDBC with parameterized PreparedStatement queries to secure CRUD transactions against SQL injection.
- Developed dynamic multi-criteria search and filter algorithms supporting job title, location, compensation range, and employment type.
- Programmed a centralized input validation framework and custom exception handling system for robust error management.

Voice Based E-mail Management system for visually impaired people using NLP

- Technologies: Python, Natural Language Processing (NLP), Speech Recognition
- Built an assistive, voice-driven email client combining speech-to-text (STT) and text-to-speech (TTS) interfaces for hands-free operations.
- Automated message composition, subject indexing, and inbox navigation using Python NLP text processing pipelines.

Education

B.E. in Electronics and Communication Engineering, 2025
Saranathan College of Engineering
Score: 73.9%

Computer Science, 2021
Periyar Centenary Memorial Matriculation Higher Secondary School
Score: 82.02%

SSLC, *Om Maruthi Matriculation School* 2019
Score: 79%

Experience

Product Testing Trainee, *Syrma SGS Technology Private Limited* 01/2025 – 11/2025

- Gained experience working in a structured corporate environment with cross-functional teams and standard compliance procedures.
- Executed functional, quality, and parametric testing on FTC solar controllers and Danfoss embedded boards.
- Documented failure logs and root-cause analyses to support quality improvement and reduce recurring defects.

Certifications

Java Full Stack Development Training — QSpiders Core Java, JDBC, Servlets, JSP, SQL, Web Technologies

NLP & Python Project Certification — Saranathan College of Engineering, Anna University

Soft Skills

Communication
Time Management
Proven ability to build secure systems
Critical Thinking
Problem Solving

Languages

English — Professional Working Proficiency

Tamil — Native

German — A1 (currently learning)
